Data Lawyer
A Chrome Extension that analyzes privacy policies and shows risk and data usage within seconds.

Chrome Web Store: https://chromewebstore.google.com/detail/data-lawyer/icghjpppgkopelahjiaihmjipfjmaac

---

What Data Lawyer does?

Data Lawyer is a Chrome extension that helps users quickly understand privacy policies by analyzing the

- A **risk score (0–100)**
- A **risk level** (LOW / MEDIUM / HIGH)
- A structured breakdown of key privacy topics:
  - Data collected
  - How data is used
  - Sharing & third parties
  - Retention
  - Rights & choices
  - Security
  - International transfers
  - Contact / complaints

Data Lawyer helps users understand what they will be accepting in the terms and conditions and hence be a

---

Key Features

Analyze privacy policies using URL or pasted policy text
Detect jurisdiction signals (EU GDPR, US-CA CCPA/CPRA, Kenya DPA, UK GDPR)
Highlight red flags such as:
- Third-party sharing
- Selling personal data
- Advertising tracking
- Retention ambiguity
- Arbitration clauses
- Weak change-notice protections

Provide clear next-step recommendations
Works directly inside the browser (Chrome MV3)

How It Works (High Level)

1. The extension detects the active page URL.
2. The user clicks **Analyze**.
3. The extension sends the privacy policy text/URL to the backend API.
4. The backend runs fast rule-based analysis.
5. The extension displays:

  - risk level
  - score
  - summary
  - evidence sections

Tech Stack

Chrome Extension (Frontend)
- **TypeScript**
- **React**
- **Vite**
- Chrome Extension **Manifest V3**
- Chrome APIs:
  - `chrome.storage`
  - `chrome.tabs`
  - `activeTab`

Backend API
- **Python**
- **FastAPI**
- **Uvicorn**
- **Gunicorn** (production)
- **Redis** (rate limiting)
- Deployed on **Render**

Project Structure

Local Setup

1. Clone the repo

//```bash
git clone https://github.com/IKitheka/data-lawyer.git
cd data-lawyer

Extension Setup
Install dependencies-
cd extension
npm install

Build extension-
npm run build

After building you can be able to find the files in-

extension/dist

Load the extension in Chrome-
1.Open Chrome
2.Go to: chrome://extensions
3.Enable Developer mode
4.Click Load unpacked
5.Select:
data-lawyer/extension/dist

Backend Setup (FastAPI)

Create virtual environment-
cd backend
python -m venv .venv
source .venv/bin/activate

Install requirements-
python -m pip install --upgrade pip
pip install -r requirements.txt

Run the backend locally-
PYTHONPATH="$(pwd)" python -m uvicorn backend.app.main:app --reload --host 127.0.0.1 --port 8000

API Usage (Test with Curl)
Health check-

curl -s http://127.0.0.1:8000/health | python3 -m json.tool

Analyze policy-

```
curl -s -X POST "http://127.0.0.1:8000/policies/analyze" \
  -H "Content-Type: application/json" \
  -H "X-Client-Id: local_test" \
  -H "X-API-Key: dl_public_beta_2026" \
  -d '{"url":"https://example.com/privacy","text":"We collect personal data and share with partners."}' \
| python3 -m json.tool
```

Data Lawyer uses these permissions:

storage-store user preferences and cached results
tabs-get the active tab URL and open policy links when requested
activeTab-access current tab only when user clicks the extension
host_permissions-allow requests to the backend API

Data Lawyer is not to be used for legal advice. This is for educational and informational purposes. Whatever

Privacy and security
-The extension does not collect any password and does require any login.
-The text is only used for analysis and nothing more.

-All API calls are made over HTTPs.
